$$\mathcal{S}^{\wedge}_{mu}$$

Imagine maps:

$$\mathrm{Map}^G_*(A, B)$$

where $A, B \in \mathsf{Top}^G_*$.

If $X \in \mathsf{Top}_*$ and $Y \in \mathsf{Top}$, we can form the spectra:

$$\Sigma^\infty X, \Sigma^\infty_+ Y$$

Theorem 1 (Pythagoras)**.** $a^2 + b^2 = c^2$.

Proof. Trivial □

Lemma 2 (Zorn's Lemma)**.** *An poset $P \in \mathsf{Poset}$ where all chains are bounded above has a maximal element.*

Proof. Axiom of choice. □

Proposition 3. $\sqrt[3]{2}$ *is not a rational number.*

Proof. Suppose it was. Then, there will be two integers $a, b \in \mathbb{Z}$ such that $a^3 + a^3 = b^3$. We will need the following:

Theorem 4 (Fermat's Last Theorem, due to Andrew Wiles)**.** *The equation $a^n + b^n = c^n$ has no integer solutions when $n \geq 3$.*

Proof. Trivial [Theorem 4] □

We see that $\sqrt[3]{2}$ being rational produces a contradiction to Fermat's Last Theorem. Therefore, it must be irrational. [Proposition 3] □

Remark 5 (Jordan curve theorem)**.** It happens

Proof. Duh □
